(54) DATA DISTRIBUTING METHOD, TRANSMITTER, RECEIVER AND DATA DISTRIBUTION SYSTEM APPLYING THIS DATA DISTRIBUTING METHOD AND DATA STRUCTURE USED FOR THIS DATA DISTRIBUTION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To perform data distribution that has high transmission efficiency without depending on information transfer media by converting stored meta-information into a transmission format that is suitable for transmission and transmitting content data and meta-information after conversion which corresponds to the content data through the information transfer media.

SOLUTION: Stored meta-information is converted into a transmission format that is suitable for transmission and content data and meta-information after conversion which corresponds to the content data are transmitted through information transfer media. An information receiving side refers to a meta-information schema representing the structure of the meta-information, selects meta-information matched with an acquisition condition and acquires content data corresponding to the meta-information, based on the selected meta-information. In this system, a transmitter 103 belonging to an information offerer is provided with a database 121 which stores content data that becomes an object to be offered, etc., and a server device 123 which transmits the stored content data to the receiving side through information transfer media.

LEGAL STATUS

[Date of request for examination] 17.09.1999
[Date of sending the examiner's decision of rejection] 20.08.2002
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
[Date of final disposal for application]
[Patent number]
[Date of registration]
[Number of appeal against examiner's decision of rejection]
[Date of requesting appeal against examiner's decision of rejection]
[Date of extinction of right]
